Hyperiondev

Beginner Data Structures – 2D Lists

WELCOME TO THE EVENT HANDLING TASK

Your Lecturer for This Session

Christiaan Joubert

Objectives

- Learn more about how to create a 2D list in python.

Lists

- ★ Lists are used when we need to store a lot of data, or the order in which the data is stored is important.
- ★ Lists are capable of holding many items in one place as well as keeping the data in order.
- ★ Python will also provide each piece of data an index that represents its position in the list.

Lists Cont.

- ★ A list is a specialised format of storing and organising data.
- ★ A list is basically a group of items / data.
- ★ Lists are known as sequence data types because they behave like an ordered collection of items.
